

## Network Management Services Space

### Space Solutions and Tools

- Connects** both with the Data Space and the Simulations Space
- Receives** input data via the Data Space, and uploads new/synthetic data to it
- Sends** scenarios and parameters to be executed in the Simulation Space, and receives scenario results/validation from it

### Space Solutions and Tools

- Contains** multiple tools and solutions, with many of them consisting of multiple sub-components.
- Components** at various levels connect in different configurations to produce the full list of FEDORA solutions.
- Operations** run across different scales from real-time responses to deep offline analysis.
- Processing** involves hybrid models requiring periodic calibration or updates at regular intervals.
